

Sebastian Andres El Khoury Seoane

+44 7490741504 | sebasandres0694@gmail.com | [LinkedIn](#) | [GitHub](#)

Final year Computer Science student at the University of St Andrews with hands-on experience in platform engineering, AWS infrastructure, Kubernetes, cloud computing, and observability. Experienced in operating multi-region EKS environments, developing Helm-based platforms, and automating infrastructure workflows with Terraform and ArgoCD. Also experienced in open-source engineering for AI Platforms. Seeking graduate roles in Platform Engineering, DevOps, SRE, or Cloud Infrastructure.

TECHNICAL SKILLS

Strong: Kubernetes, AWS, Terraform, Docker, Python, Helm, Grafana, TypeScript, Java.
Familiar: ArgoCD, Kyverno, Linux, Bash, GitHub Actions, GCP, AWS IAM, S3, Route 53, AzDO, Prometheus, OpenTelemetry.
Basic exposure: Terraform Sentinel, Cilium, Jaeger, OpenCode, Hermes Agent, Ollama.

EDUCATION

University of St Andrews | St. Andrews, United Kingdom **Sep 2023 — Jun 2027**
BSc in Computer Science | Final Year | Current GPA: 3.6/4.0
• Courses: Data Structures & Algorithms, Web Programming & Networks, Operating Systems, Systems Programming.
• Honours: International Foundation Programme High-Merit (2023–2024), Dean’s List (2024–2025).

RELEVANT EXPERIENCE

TMX Trayport | London, United Kingdom **Jun 2026 — Sept 2026**
Platform Engineering Intern
• Engineered platform infrastructure across 10+ multi-tenant, multi-region deployments for a mission-critical, stock-trading exchange environment in a hybrid cloud serving 45+ broker/exchange venues, processing 620M+ trades annually, built on AWS EKS and Azure AKS web services clusters through HCP Terraform and maintaining Helm charts, Kubernetes namespaces, IAM access, TLS/mTLS, DNS, TCP/IP firewall rules, Cilium policies, resource limits, and OpenTelemetry collectors.
• Architected and delivered a Python/LLM-based agentic workflow for EKS upgrade risk assessment, reducing per-cluster assessment time from approximately two weeks to five minutes and becoming the team’s primary upgrade-assessment workflow across 10+ clusters.
• Refactored Kubernetes platform operations through Kyverno policy migration and automated parity testing, while consolidating AWS ALBs to reduce infrastructure costs by approximately \$500/month and establishing S3-backed createdump infrastructure for production Dotnet crash-dump analysis.

Saint Andrews Research Internship Scheme | St. Andrews, United Kingdom **Oct 2024 — Jan 2025**
Software Engineering Intern
• Authored and delivered PLANLib, an open-source planning library adopted by 100+ teams in the International Planning Competition.
• Built and deployed a static documentation platform using Jekyll and Bootstrap 5 to host and index 100+ problem instances, improving discoverability and onboarding.
• Established CI/CD using GitHub Actions to automatically build and deploy the platform to GitHub Pages, eliminating manual releases and saving ~2 hours per week.

TechInterviewCoach | London, United Kingdom **Jun 2024 — Oct 2024**
Frontend Developer Intern
• Developed responsive UI components for TechInterviewCoach, an interview coaching platform matching 1,240+ engineers with 15+ vetted ex-FAANG and top-tier tech coaches, using Jekyll and Bootstrap 5; improved Lighthouse performance score from 62 to 78 and fixed cross-browser layout issues.
• Improved code quality through 10+ Agile code reviews, collaboratively debugging and resolving frontend issues.

PROJECTS

Odysseus AI **Jun 2026**
Open-Source Contributor
• Added support for Apple Foundation Models as a new local model provider in *Odysseus*, an open-source self-hosted platform for discovering and serving local and cloud LLMs, implementing Apple Silicon model detection.

Web Accessibility Testing Platform **Sep 2025 — May 2026**
CS3050 Team Project, University of St Andrews
• Led a 5-member backend team within a 20-person cross-functional project, owning backend delivery for a web accessibility testing platform.
• Designed and implemented authentication flows, PostgreSQL data models, Redis-based caching, and Node.js JSON REST APIs using OpenAPI for well-documented, scalable frontend integration.

House Searcher Web App **Oct 2024**
Personal Project
• Built a full-stack housing search platform using React, Node.js, and Express, with OAuth and JWT authentication via Passport.js and a PostgreSQL-backed backend for the API.
